

## Magento Implementation Guide v2.0

### Requirements

- Magento v1.5+

### Installation

#### Step 1: Install the Module Files and Configure the Module

Installing the module is as simple as copying the app folder onto your server, then entering in your partner information.

1. Copy the entire **app** folder into the root directory of where you installed Magento. No files will be replaced.
2. After all files have copied over, log into your Magento Administration area, and navigate to **System > Configuration**.
3. From the left-hand menu, choose **Payment Methods**.
4. If the installed worked, you will see Bongo Checkout listed as a payment method. Select it and **enter your Partner Key and Checkout URL**, then save.
5. Select **Bongo > Postorders** and set to 'Yes' if you plan to use HTTP Notifications. If you're using a Personal Shopper, set this to 'No'.
6. Select **Bongo > Settings** from the left-hand menu.
7. Enter the **Merchant Address** (where you will ship your items from) and the **Bongo Address** (the Bongo distribution center where you will send international orders to).
8. Select whether to use the highest or lowest domestic shipping rate available for shipping between the two addresses.
9. Lastly, set how often the temporary orders that Bongo creates will be Cancelled. You can leave this set to the default 60 minutes.

#### Step 2: Configure Magento

The next step is to setup your Shipping Methods so that international customers don't get confused and see international shipping options from your domestic carriers.

In order to continue through Magento's checkout however the user needs to select a Shipping Method. So what we'll do is turn on Flat Rate or Free Shipping for **only** non-US customers. Domestic shipping charges will still be calculated and applied in the background, but the international customer will not see that.

1. In the configuration section select **Sales > Shipping Methods**.
2. Click '**Flat Rate**' or '**Free Shipping**', either one works.

## Magento Implementation Guide v2.0

3. Set Enabled to '**Yes**'.
4. Set the **Title** to something like 'Bongo International Shipping -- Shipping will be calculated on the following page'.
5. Set the Price (if using Flat Rate) to \$0 -- don't worry, the actual domestic shipping charges are being calculated between your location and our distribution center, this is just to control what is displayed to the customer.
6. Change **Ship to Applicable Countries** to **Specific Countries**
7. Next to Ship to Specific Countries select all non-US countries.
8. Save.

Now you should see Bongo appear as both a shipping and payment method if you attempt to checkout as an international customer. You should not see any other shipping or payment methods as an international customer.

### Step 3: Configure Bongo Checkout

You only need to do this if you're using HTTP Notifications.

1. Login to your Partner Portal by going to <http://bongous.com/partner>
2. Select **Orders > HTTP Notification**
3. Set the Callback URL to: <http://www.YOUR-SITE.com/index.php/postorder/index/> (where YOUR-SITE is replaced with your domain).
4. Select '**Activate Service**'
5. Click **Save/Update**.

## Notes

### Excluding Countries

If you wish to exclude certain countries from using Bongo Checkout (i.e. Canada), enter the 2-letter country code next to Excluded Countries. Separate multiple countries with commas.
