

## Big Commerce Implementation Guide v1.0

### Installation

**NOTE:** This module requires you make changes to your shopping cart's URL structure. The change required will *\*not\** affect your SEO and may actually improve it by including the item SKU in the URL. If you do not wish to make this change for any reason please contact your product or implementation specialist.

**1. Upload bongocheckout.js to your content folder.**

**2. Change the following settings from 'Settings' > 'Store Settings'**

**1. Display > Display Settings:**

Next to 'Add to Cart' Action choose 'Take Them to Their Shopping Cart'

**2. URL Structure > Product URL Settings:**

Set to Custom and enter in: `/productname%/sku%/`

Click 'Save'

Click 'Update Product URLs...'

**3. Open 'Design' > Template Files > cart.html**

Insert the following code below BEFORE the closing div. See the screenshot at the end of this document if you're not sure where to place the code here. **Make sure to replace CHECKOUT URL with the one given to you, if you don't have this, contact your product or implementation specialist.**

```
<form name="BongoCheckoutForm" method="post" action="CHECKOUT URL">
</form>
<script type="text/javascript" src="content/bongocheckout.js"></script>
<script type="text/javascript">
    BongoCheckout.Init();
</script>
```

**4. Update the partnerKey and set per\_item\_shipping and shipping\_cost in bongocheckout.js**

## Big Commerce Implementation Guide v1.0

### Customization

There are a variety of modifications that can be made to the look and feel of the Bongo Checkout module. Within the included JavaScript file, starting at line 62 there are various parameters that you can change:

- **partner\_key** - Your Bongo Checkout partner key.
- **prompt** - The text displayed to the user above the Bongo Checkout button.
- **button\_image** - URL of the image to use for the button. Defaults to one provided by Bongo.
- **per\_item\_shipping** - A boolean value indicating whether to apply a flat shipping cost per item, or per order. Setting this to true will charge a shipping cost for each item, setting this to false will apply a single shipping cost to the entire order.
- **shipping\_cost** - The shipping cost to be used on a per-item or per-order basis.
- **debug\_mode** - This can be left turned off. If you experience technical issues, our implementation specialist may ask you to set this to 'true' so they can better analyze the problem.

### Understanding per\_item\_shipping

- When set to **true**, the customer will be charged shipping\_cost for each item in their cart.
  - *Example:* shipping\_cost = \$5, Total number of items = 10  
Total shipping cost = 5 x 10 = \$50
- When set to **false**, they will be charged a flat rate for the overall shipment.
  - *Example:* shipping\_cost = \$5, Total # of items = 10  
Total shipping cost = \$5
